#SayNoToPieCharts

# Session Objectives

# Session Objectives

- Introduce Fabric and OneLake
- Set the scene for Direct Lake
- Take it for spin.. 😊

# Introducing Fabric

# Microsoft Fabric

The unified data platform for the era of AI

Data  
Factory

Synapse Data  
Engineering

Synapse Data  
Science

Synapse Data  
Warehousing

Synapse Real  
Time Analytics

Power BI

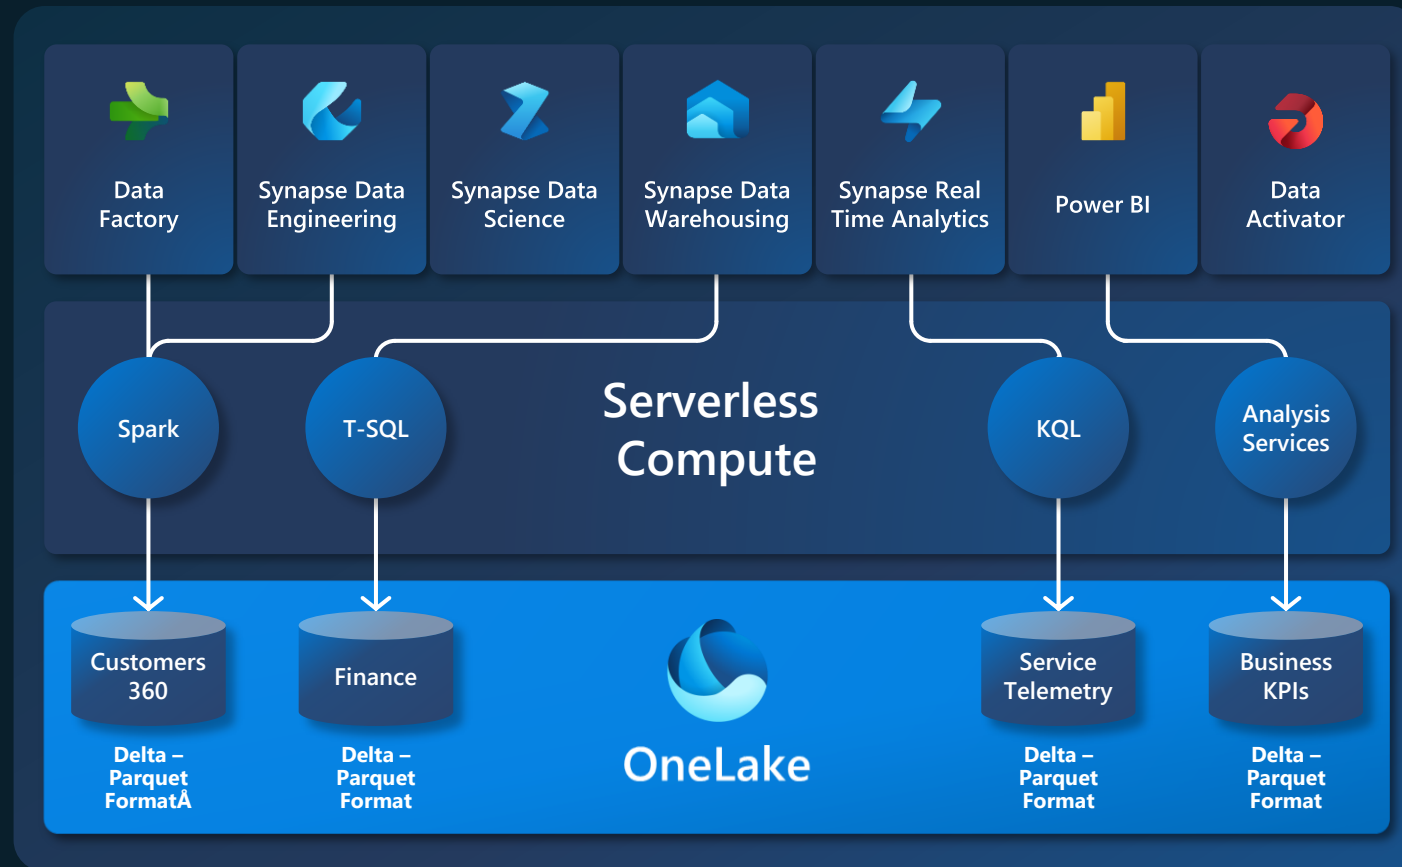

Data  
Activator

OneLake

# One Copy for all computes

## Real separation of compute and storage

All the compute engines store their data automatically in OneLake

The data is stored in a single common format

Delta – Parquet, an open standards format, is the storage format for all tabular data in Fabric

Once data is stored in the lake, it is directly accessible by all the engines without needing any import/export

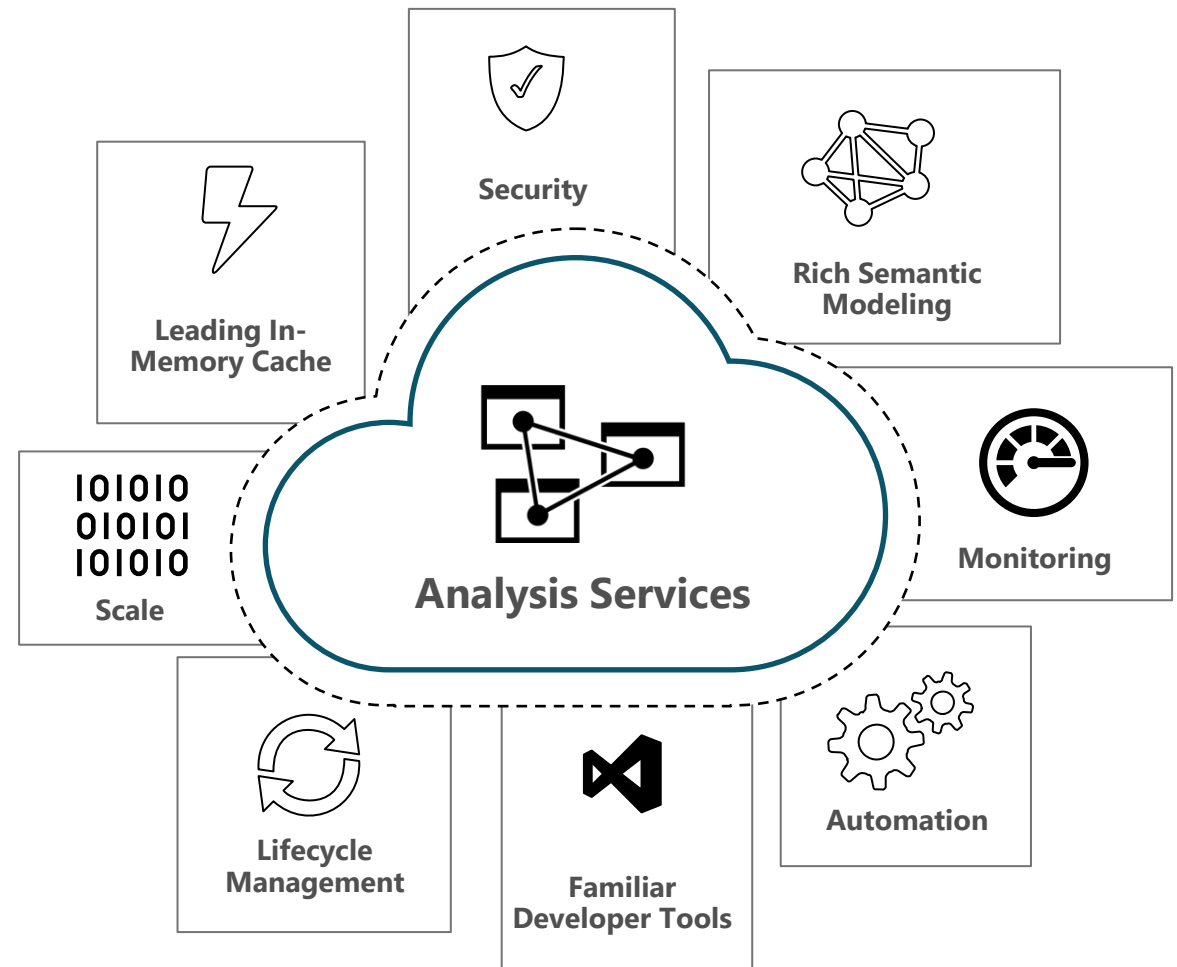

All the compute engines have been fully optimized to work with Delta Parquet as their native format

# Analysis Services Engine

## Battle tested Analytics Engine Technology

- Enterprise grade analytics **engine** as a service
- Excellent query performance over massive data volumes
- Rich semantic modeling
- Interactive Exploration over even **TRILLIONS** of rows of data, by intelligent proactive caching of aggregates

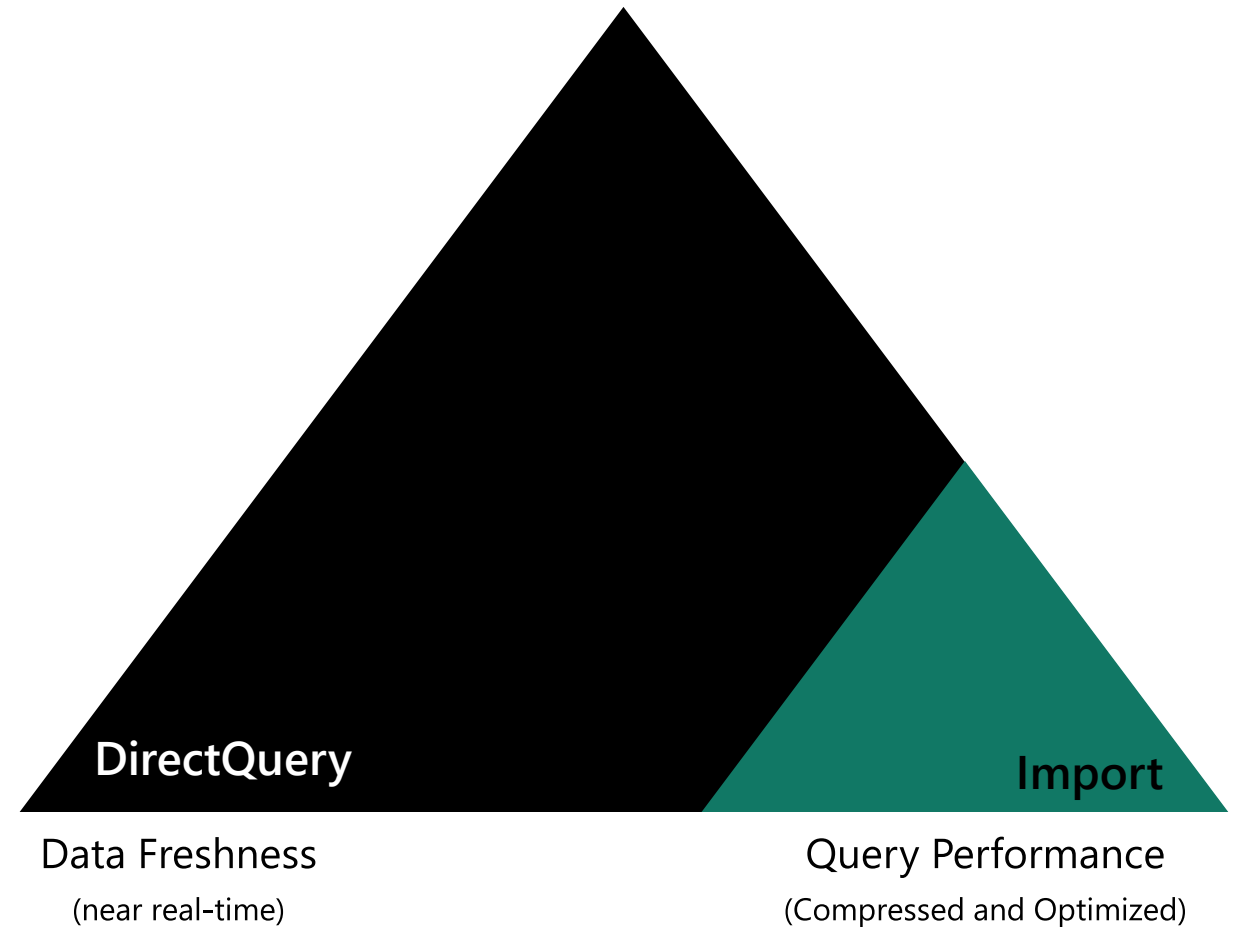

# Storage Modes

**Import:** Caches data into memory to deliver extremely fast performance using the **analysis services** database engine. The default mode when creating a new Power BI Desktop solution along with providing Data Modelers the most design flexibility.

**DirectQuery:** Does not import the data into memory, consists only of the metadata defining the structure. When the model is queried, native queries are used to retrieve data from the underlying data source.

Changing the **Storage mode** of a table to **Import** is an irreversible operation. Once set, this property can't later be changed using Power BI Desktop.

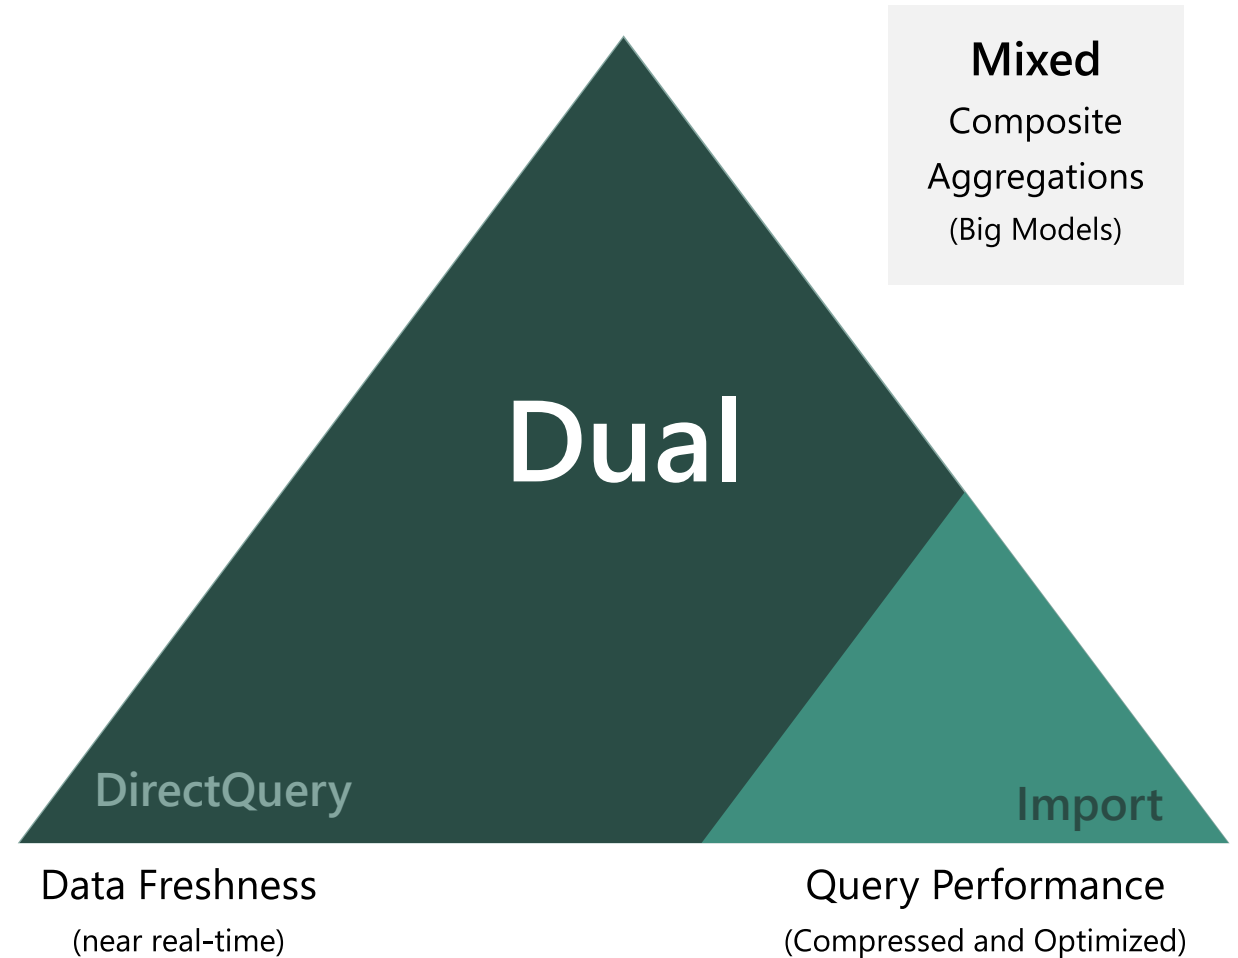

# Storage Modes

**Import:** Caches data into memory to deliver extremely fast performance using the **analysis services** database engine. The default mode when creating a new Power BI Desktop solution along with providing Data Modelers the most design flexibility.

**DirectQuery:** Does not import the data into memory, consists only of the metadata defining the structure. When the model is queried, native queries are used to retrieve data from the underlying data source.

**Dual:** Can act as either cached or not cached, depending on the context of the query that's submitted to the Power BI dataset. In some cases, you fulfill queries from cached data. In other cases, you fulfill queries by executing an on-demand query to the underlying data source.

Changing the **Storage mode** of a table to **Import** is an irreversible operation. Once set, this property can't later be changed to either **DirectQuery** or **Dual** using Power BI Desktop.

# Storage Modes

---

**Direct Lake:** A groundbreaking new dataset capability for analyzing very large data volumes. Based on loading parquet-formatted files directly from a data lake **without having to query a Lakehouse endpoint**, and **without having to import or duplicate data** into a Power BI dataset. Direct Lake is a fast-path to load the data from the lake straight into the Power BI engine, ready for analysis and yielding performance similar to import mode.

**DirectQuery (fallback):** Automatically switches modes—either due to current limitations or based on factors such as available memory in the capacity.

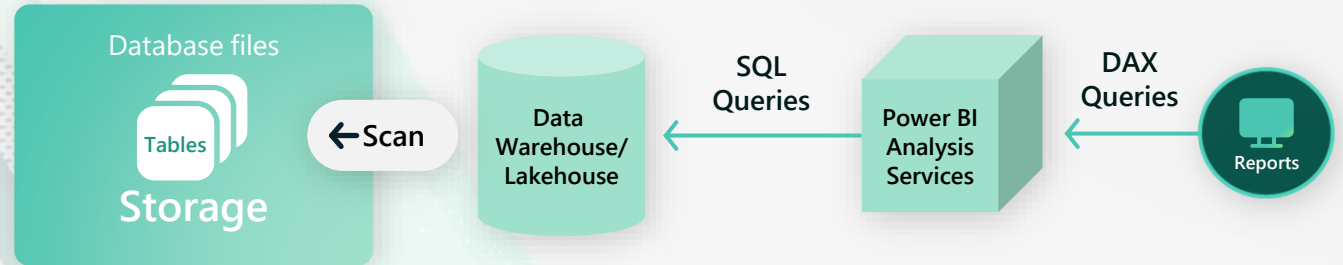

# Power BI | Direct Lake Mode

**Direct Lake** is a fast-path to load the data from the lake straight into the Power BI engine, ready for analysis

Direct Lake is based on loading parquet-formatted files directly from a data lake without having to query a Lakehouse endpoint, and without having to import or duplicate data into a Power BI dataset

## DirectQuery Mode. Slow, but real time

## Import Mode. Fast, but latent and duplicative

## Direct Lake Mode. Fast and real time

Why Delta?

# Why Delta (Parquet)?

Open Standard for file format

Column oriented, efficient data storage and retrieval

Efficient Data Compression and Encoding

Becoming the Industry Standard

Well suited for pruning ( Column, rowgroup)

Thrives on bulk operations

# What is Parquet

Product	Quantity	Customer
Apples	1	Adam
Oranges	3	Sue
Pears	2	George
Apples	1	Eve
Apples	1	Eris

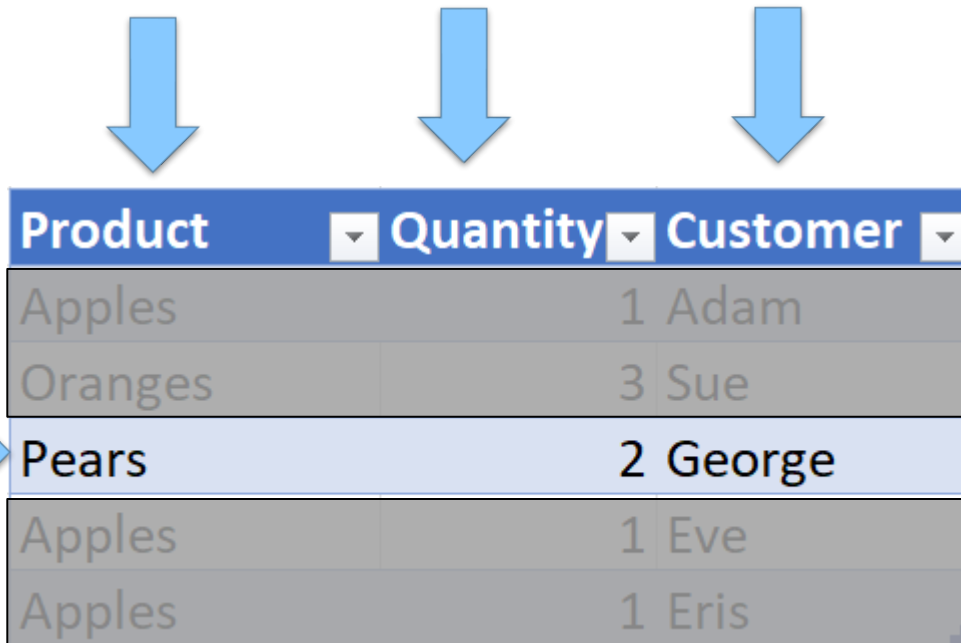

**A columnar format...**

Great for this

```
SELECT SUM(Quantity)
GROUP BY Customer
```

# What is Parquet

Product	Quantity	Customer
Apples	1	Adam
Oranges	3	Sue
<b>Pears</b>	<b>2</b>	<b>George</b>
Apples	1	Eve
Apples	1	Eris

**A columnar format...**

Not so great for this:

```
UPDATE (Product, Quantity)
WHERE Customer='George'
```

# What is Parquet

Product	Quantity	Customer
Apples	(6)	1 Adam
Oranges	(7)	3 Sue
Pears	(5)	2 George
Apples	(6)	1 Eve
Apples	(6)	1 Eris

Product Size = 30 characters (bytes)

..., dictionary encoded, ...

Let

Apples = 1

Oranges = 2

Pears = 3

# What is Parquet

Product	Quantity	Customer
1	1	Adam
2	3	Sue
3	2	George
1	1	Eve
1	1	Eris

Product Size = 5x4 bytes = 20 bytes

**..., dictionary encoded, ...**

Let

Apples = 1

Oranges = 2

Pears = 3

# What is Parquet

Product	Quantity	Customer
0b01	1	Adam
0b10	3	Sue
0b11	2	George
0b01	1	Eve
0b01	1	Eris

Product Size = 5x2 bits = 10 bits ~ 2 bytes

**That's 15x smaller!**

**..., dictionary encoded, ...**

**2 bits are enough for 3 values!!! - BITPACKING**

Let

Apples = 1 = 0b01

Oranges = 2 = 0b10

Pears = 3 = 0b11

# What is Parquet

..., with **RLE compression**

**RLE** - Run-length encoding

(replace repeated occurrences with the count)

Product	Quantity	Customer
Apples	1	Adam
Oranges	3	Sue
Pears	2	George
Apples	1	Eve
Apples	1	Eris

# Introducing V-Ordering

Write time optimization to parquet files

Sorting, row group distribution, dictionary encoding, and compression (Shuffling)

Complies to the open standard

Z-Order, compaction, vacuum, time travel, etc. are compatible with V-Order

# V-ordering in action

Microsoft Internal DB (162 tables)

x3.2

Reduced IO for workloads

# V-ordering in our demo case

## Copy data details

Copy\_mns

Source: Azure SQL Database → Destination: Lakehouse

Data read: 24.016 GB | Data written: 5.909 GB

Rows read: 181,940,575 | Files written: 1

Rows written: 181,940,575

Status: ✔ Succeeded

Start time: 6/5/2023, 3:22:03 PM

Pipeline run activity ID: 09aa4ccc-d8ae-4e70-aec7-c76a020ddd3c

Throughput: 10.321 MB/s

Total duration: 00:38:53

Duration breakdown

Start time: 6/5/2023, 3:22:04 PM

Optimized throughput: Standard

Used parallel copies: 1

**What is Direct Lake Mode?**

# DirectLake Mode

- On start, no data is loaded in-memory
- Column data is transcoded from Parquet files when queried
- Tables can have mix of transcoded (resident) and non-resident
- Column data can get evicted over time
- DirectLake fallback as an alternative
- “Framing” of dataset determines what gets loaded from DeltaLake

**STOP! Demo time!**

Using Direct Lake mode over a Lakehouse

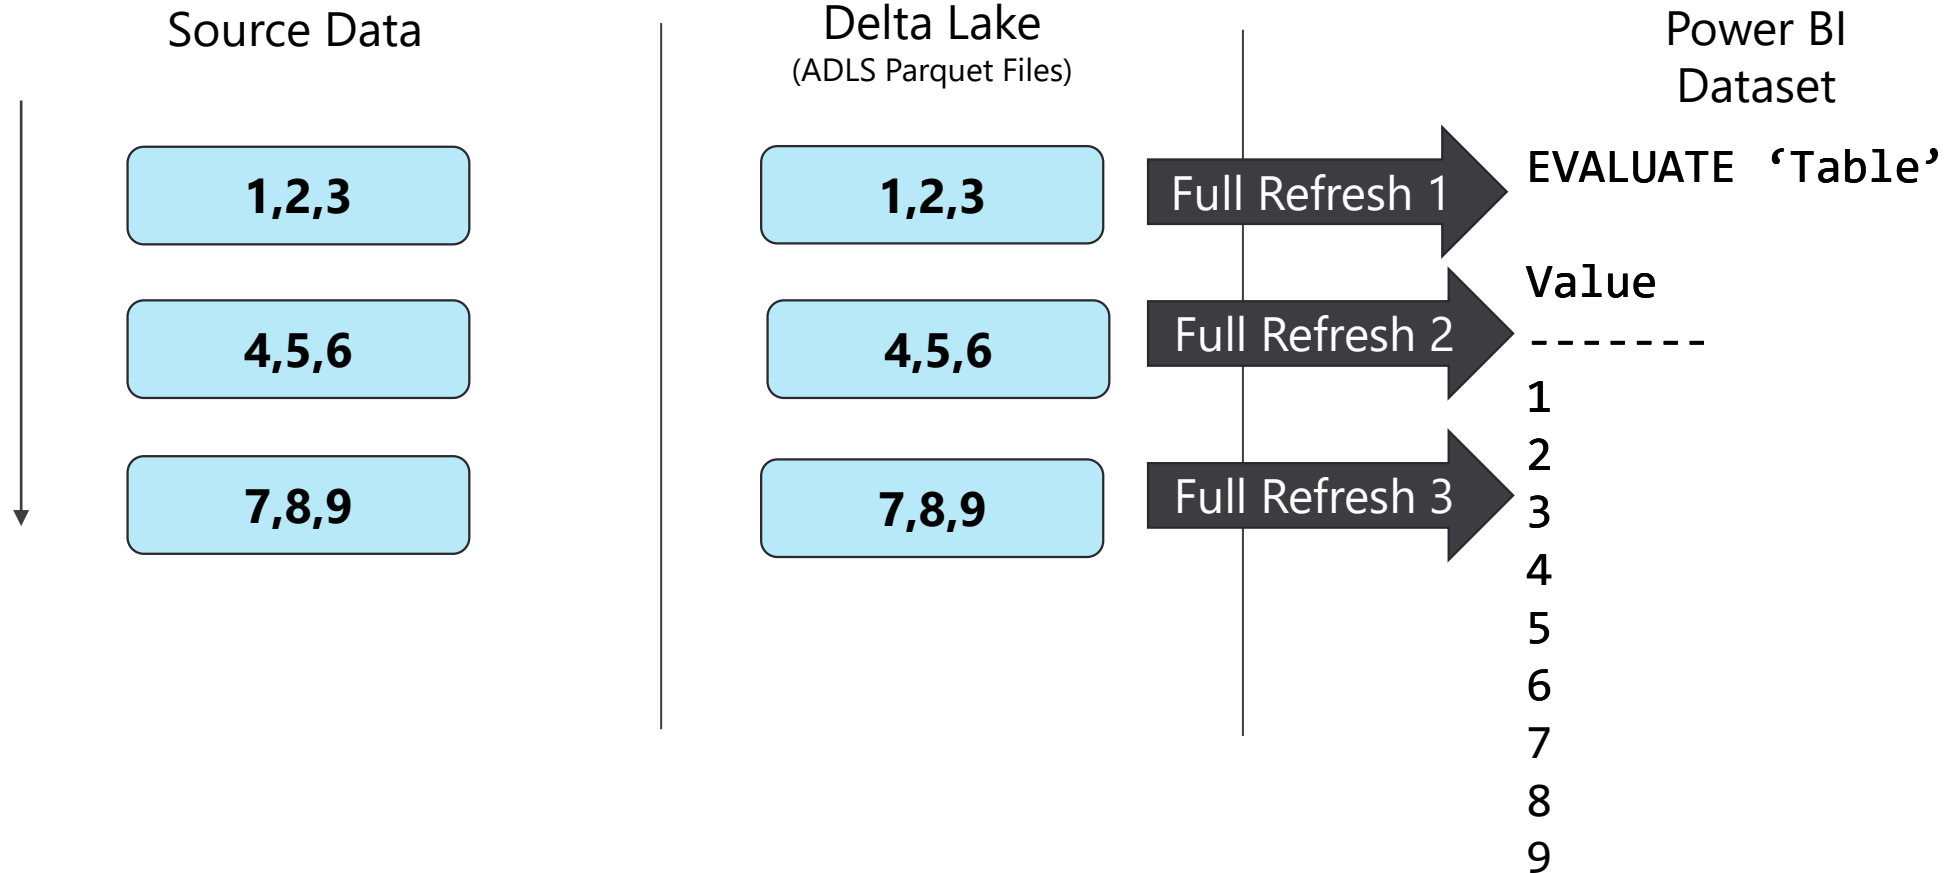

**STOP! Demo time!**

Let's look at Framing

# Framing

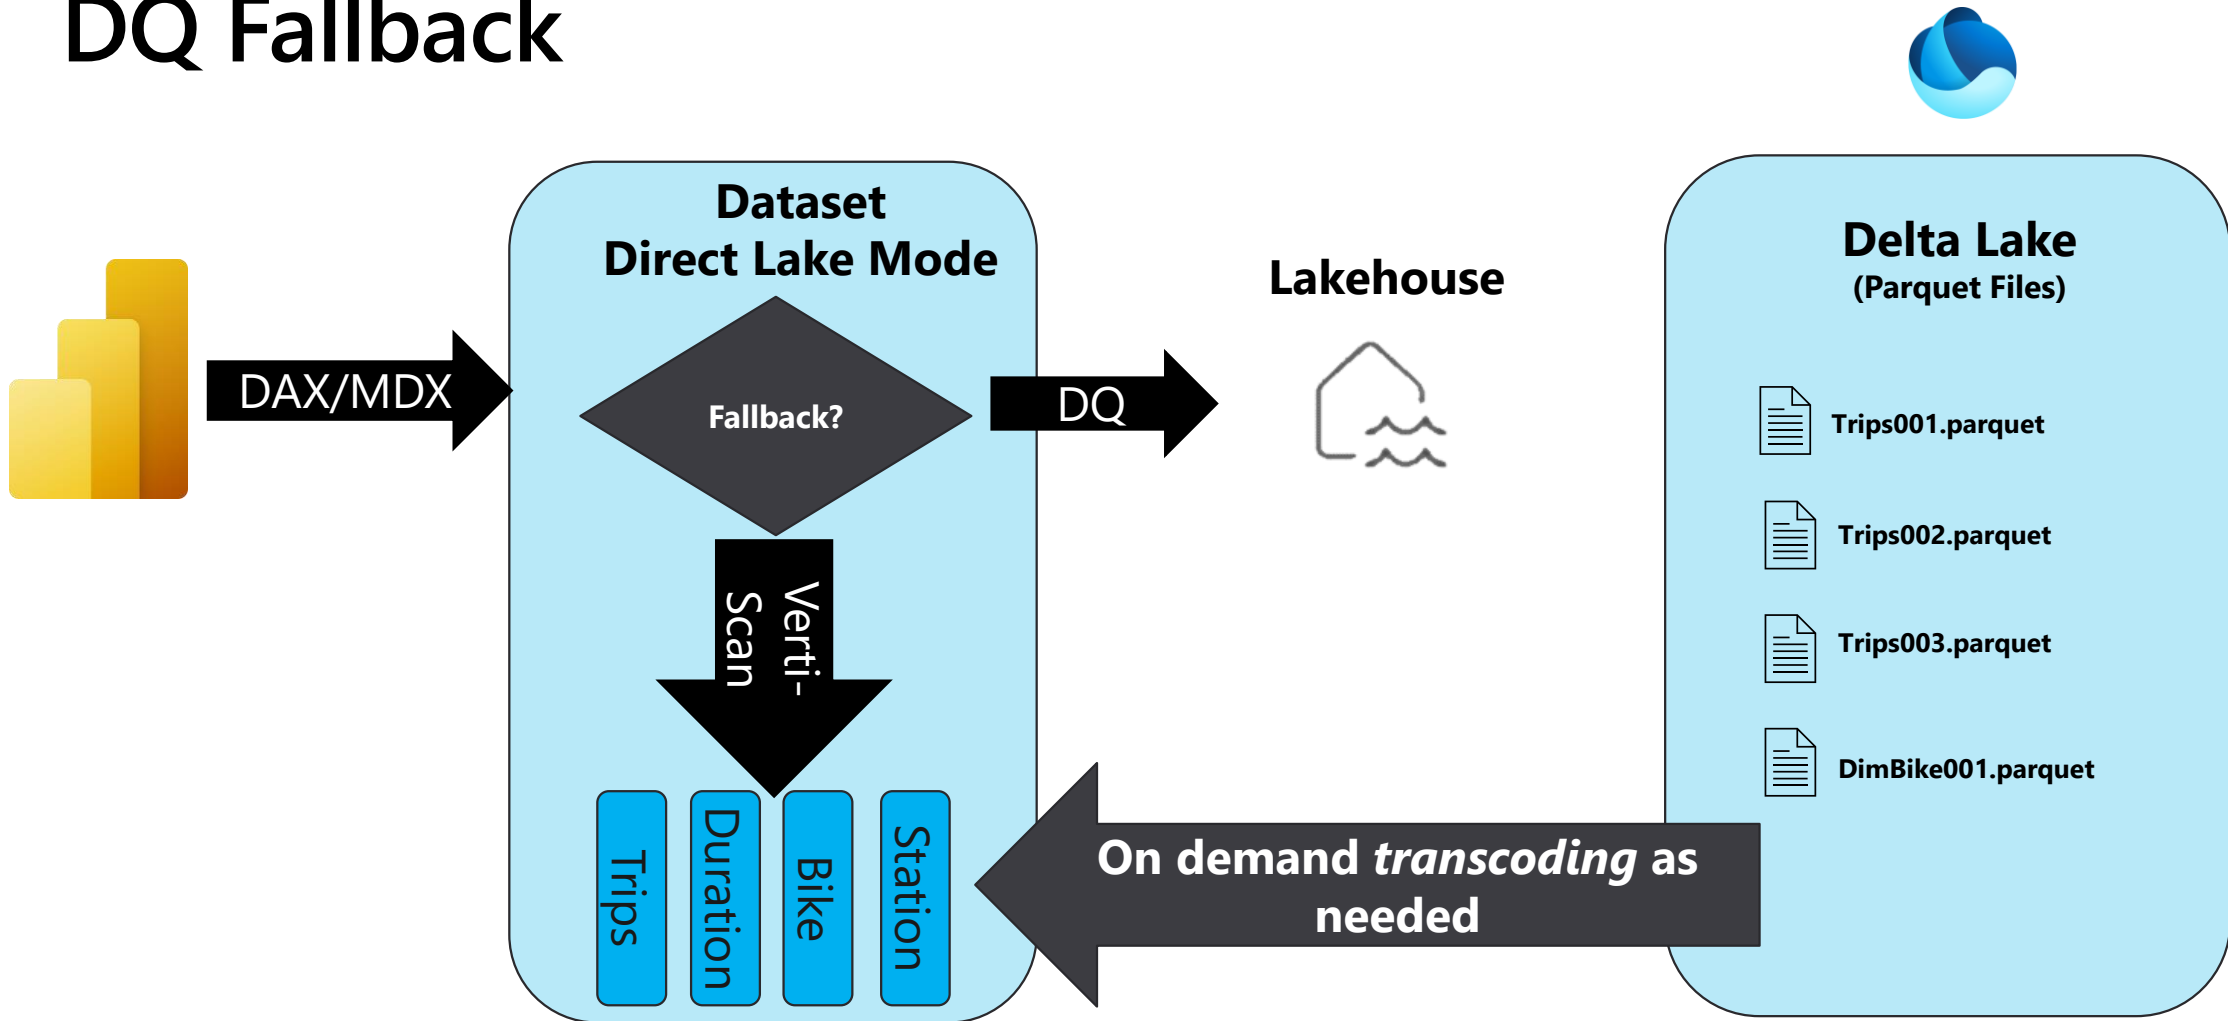

- What is framing
  - "point in time" way of tracking what data can be queried by DirectLake
- Framing is near instant and acts like a cursor
  - Determines the set of .parquet files to use/ignore for *transcoding* operations
- Why is this important
  - Delta-lake data is transient for many reasons
- Typical ETL Process
  - Ingest data to delta lake tables
  - Transform as needed using preferred tool
  - When ready, perform *Framing* operation on dataset

# Framing

**Fallback to DirectQuery**

# DQ Fallback

# Guardrails

Fabric/Power BI SKUs	<u>Parquet</u> files per table	Row groups per table	Rows per table (millions)	Max model size on disk/OneLake1 (GB)	Max memory (GB)
F2	1000	1000	300	10	3
F4	1000	1000	300	10	3
F8	1000	1000	300	10	3
F16	1000	1000	300	20	5
F32	1000	1000	300	40	10
F64/FT1/P1	5000	5000	1500	Unlimited	25
F128/P2	5000	5000	3000	Unlimited	50
F256/P3	5000	5000	6000	Unlimited	100
F512/P4	10000	10000	12000	Unlimited	200
F1024/P5	10000	10000	24000	Unlimited	400
F2048	10000	10000	24000	Unlimited	400

# Limitations

- DateTime relationships
- Calculated Columns and Calculated Tables
- Complex delta table column types (i.e. Binary and GUID)
  - Some other
- T-SQL Based views will always fallback to DQ mode
- Composite models are not yet supported

# Identifying Fallback

- You can tell when Fallback happens if ..
  - It's slower than usual 😊
  - Using the Performance Analyzer, you see a "DirectQuery" category
  - Performing a trace, you see DirectQueryBegin and DirectQueryEnd events
  - Depending on the behaviour, you get an error

# Controlling Fallback Behaviour

- The FallbackBehaviour is set to 'Automatic' by default
- Alternative options are:
  - DirectLake only
  - DirectQuery only
- Be careful when making changes to this ..

## Couldn't load the data for this visual ✕

We cannot process the request because the table 'vw\_Records' either does not exist or requires fallback to DirectQuery mode. Fallback to DirectQuery mode is disabled in this semantic model. Consider enabling fallback to DirectQuery mode and try again. See <https://go.microsoft.com/fwlink/?linkid=2248855> to learn more.

Close

**STOP! Demo time!**

Let's look at Fallback

# External Tools

# External Tools

- For now, Web Based Modelling is the recommended way
- But .. You can use External Tools!
- Be sure to enable the tenant and workspace setting to allow
- <https://blog.tabulareditor.com/2024/01/29/new-access-your-tabular-editor-authored-model-in-the-fabric-ui/>

## Data **model** settings

### ▾ Users can edit data **models** in the Power BI service (preview)

*Enabled for the entire organization*

Turn on this setting to allow users to edit data **models** in the service. This setting doesn't apply to DirectLake semantic **models** or editing a semantic **model** through an API or XMLA endpoint. [Learn More](#)

Enabled

Apply to:

The entire organization

Allow contributors to update the app

Template apps

## Template apps

Template apps are developed for sharing outside your organization. A template app workspace will be created for developing and releasing the app. [Learn more about template apps](#) 

Develop template apps

Data model settings

## Data model settings

Allow workspace members to edit data models in the service. Edits are permanent and automatically saved in this feature preview, and version history isn't saved. This setting doesn't apply to Direct Lake datasets or editing a dataset through an API or XMLA endpoint. [Learn more](#) 

Users can edit data models in the Power BI service (preview)

Optimizing Delta for Direct Lake mode

# Optimizing Delta for Direct Lake mode

- V-Order makes a big difference, as it's tailored for Verti-Scan
- Direct Lake will work over Shortcuts to external data
  - Expect a performance impact, because reasons ..
- Direct Lake thrives on fewer, larger .parquet files
  - Physical structure will always be crucial
  - OPTIMIZE (bin-compaction) and VACUUM in the Data Engineering process will be key
  - Especially with streaming/small batch architectures, keep this in mind
- Principle of lean models will still apply
  - Only include what's needed for the reports and datasets

Warming the cache

# Common Answers to Common Questions

# “Greatest Hits”

- Delta doesn't like spaces in object names 😊
- Delta Tables are a hard requirement for Direct Lake mode
  - Dataflows Gen2, Pipelines, Notebooks can create them for you in the lakehouse
- Web modelling is the recommended way to create DirectLake datasets
- XMLA Read/Write is supported, but disables web modelling (default)
- Direct Lake doesn't have unique DAX limitations
  - DQ does ..
- No confirmed plans right now to support Apache Iceberg, HUDI, ..
- YES, you can have Copilot! (Now stop asking me)

**What does this mean for my data modelling?**

**STAR SCHEMA**

**ALL THE MODELS**

*Data should be transformed as far upstream as possible, and as far downstream as necessary.*

Matthew Roche, 2021

(The purple haired sword aficionado)
